

# c360 Console 3.0.8.371

## Release Notes

### *Description of changes between 3.0.8.257 and 3.0.8.371*

#### Fixed Issues

Issue ID	Summary Description
D308CO1623	CO - Associated entity list cell "Look For" should search amongst only those entity records which are associated with the current record selected in a publisher cell.
D308CO1676	CO – Error when configuring the search cell (ResourceManager error). When configuring a search cell in Console a strange ResourceManager error is thrown. This was specific to a load balanced MSCRM installation.
D308CO1546	CO – Record Details layout different from CRM layout. When any row layout in a CRM record only contains one field, the resulting record detail layout in Console is not correct. It needs to be evenly spaced as CRM.
D308CO1672	CO – If a textbox contains a very long string the textbox will grow to the size of the string, causing the formatting of the cell to be in error.
D308CO1717	CO – Console screen does not auto refresh on adding a custom button.
D308CO1720	CO - Search cell throws error 'specified attribute not found....' on clicking 'Configure cell'. This occurs when a custom attribute is configured in the Search Cell and the subsequently deleted from the CRM entity.
D308TK756	CO - Allow for explicit Administrator role override through the c360 configuration file. This feature will allow user to override the administrative role by modifying the "AdministratorRole" key in c360.config file, the value of which can take a form of "GUID" or the "role name". If this key is present, it will take precedence over standard permissions check. A user belonging to the specified role or GUID will be considered as an administrator. If the role name contains special characters, user has to encode the role name string appropriately before assigning the role value to the "AdministratorRole" key.

## Notes

Defect ID	Summary Description
	If an installation has a previous released version of c360 Multi- Field Search; an upgrade to this latest release of Console requires the upgrade to the version of Multi-Field Search as well. An older version of c360 console will not function with the latest c360 Multi-field Search installed and vice versa.

## Known Issues

Defect ID	Summary Description
D308CO1744	<p>CO - A JavaScript error is reported on clicking the product link when you install console MR2 release on top of either 3.0.8.191 or 3.0.8.191 + MR1 .</p> <p>The fix is to clear the Temporary Internet files, refresh the browser and proceed.</p>

# c360 Console 3.0.8.257

## Release Notes

### *Description of changes between 3.0.8.191 and 3.0.8.257*

#### New Features

Feature ID	Summary Description
F308CO371	CO – Administrator can now specify the record type code and unique identifier which are passed by the custom button. Administrator can also specify the page that the button will call. This Custom Button is visible in CRM View, Associated entity list and search cell.
F308CO448	CO – A feature to display deactivated entities in the search cell by checking the check box “Display Deactivated Record”.

#### Fixed Issues

Issue ID	Summary Description
D308CO1546	CO- Record details Layout different from CRM layout. When any row layout in a CRM record contains only one field in a column, the resulting record details layout in Console was incorrect. The fix has now made the record details layout evenly spaced.
D308CO1554	CO – Limit the number of entities returned by Console in Search. When doing a search using “Search Cell ”, this fix limits the number of entities returned and improves the performance of the search. Changes to “Search Cell” also affect the search engine in Console.
D308CO1565	CO – Quick Find Search operation displays inactive records when searching using an entity button.
D308CO1576	CO – Web page dialog did not show deletion confirmation details when user tried to delete activities from CRM view.

#### New Features

Feature ID	Summary Description
F308CO371	CO – Administrator can now specify the record type code and unique identifier which are passed by the custom button. Administrator can also

specify the page that the button will call. This Custom Button is visible in CRM View, Associated entity list and search cell.

# c360 Console Version 3.0.8.191 Release Notes

## *Description of changes between 3.0.7.515 and 3.0.8.191*

### **New Features**

<b>Feature ID</b>	<b>Summary Description</b>
F308CO0435	CO - Ability to edit 'Record Details' Cell in Console.

### **Fixed Issues**

<b>Issue ID</b>	<b>Summary Description</b>
