OnePlaceMail - SharePoint Sandbox Solution

If you would like to capture email attributes as SharePoint columns, the columns must be created in SharePoint. For your convenience we have provided an optional SharePoint Sandbox Solution to save you the time creating columns manually.

The OnePlaceMail SharePoint Solution can be deployed manually through the SharePoint User Interface (web browser), or automated using PowerShell scripts. Please refer to this KB article: http://www.scinaptic.com/support/0052.html to learn more about the Sandbox solution and installation instructions.
